

PREPARED FOR TRADESMEN MARKETPLACE INC.

Our answers to your 22 questions

Developer due diligence, 24 August 2026

Platform build	\$3,000 USD
Native apps, both stores	\$1,500 USD
Total	\$4,500 USD
Hosting, upkeep and maintenance	\$500 USD per month

Wizard Web · wizardweb.ca
Clinton Wasylishen

A working document. We are flexible and we can build to your terms.

Two things before the answers.

First, what you have seen so far. The platform at tradesmen.wizardweb.ca is an outline, built for you, by me, based on limited knowledge. A quick sketch, a blend of what I heard from you and what I guessed you might want, put on a screen so we would have something real to react to instead of a document. It is not a finished product. Everything in it is a suggestion rather than a position, and the parts that do not match your vision get changed.

Second, the numbers, so they are not buried. \$3,000 to build the platform. \$1,500 for native iPhone and Android apps published to both stores. \$4,500 in total. \$500 a month thereafter for hosting, upkeep and maintenance.

SECTION 1: OWNERSHIP AND INTELLECTUAL PROPERTY

1 WHO OWNS THE SOURCE CODE?

You do, all of it, and that includes the intellectual property. The code, the design, the data, and any concept unique to your platform. We will not claim ownership of common building blocks any developer would write the same way, a login screen, a database table, but everything that makes this yours is yours. In writing, before any money changes hands.

2 IF WE STOP PAYING THE \$500 A MONTH?

You keep everything. The code, the data, the right to operate it. What ends is us running it for you.

What the \$500 covers: upkeep and maintenance of everything you need. Bug fixes, security issues, platform and dependency updates, code improvements, keeping the services healthy, and watching that the platform stays up. We are responsible for the upkeep, all of it, at no extra charge. It also covers the hosting itself.

What it does not cover is major new features or a significant change of direction, which we scope and price separately. We would rather draw that line clearly now than argue about it later.

3 IS THE PLATFORM BUILT FOR US, OR AN EXISTING PRODUCT?

It was built for you, by me, based on limited knowledge, as described above. An outline rather than a product. Not licensed software you would rent from us, and not a finished system with your name pasted on it.

That is also why some of it does not match your vision. I was filling gaps with my own assumptions. Now that your vision is written down, those parts change.

4 WILL IT LIVE ON A DOMAIN AND HOSTING WE OWN?

Your domain, yes, registered in your name with your billing, and you hold it.

Hosting is different and we want to be straight about how it works, because it is part of what you are paying for rather than something we resell you.

Your platform runs on enterprise grade infrastructure, in an environment we create and operate for your project alone, isolated from every other client we serve. Nobody else's traffic, code or incident can touch yours. You will have visibility into your own environment and its settings. Running it, the deployments, the monitoring, the updates and the security, is part of the \$500 a month. The \$500 is our work and our responsibility for keeping you up. It is not hosting resold at a markup.

Which providers sit underneath is part of what you are buying rather than part of what you are being sold, and we go into it properly once we are working together. It is also not fixed forever: this field moves quickly, and keeping that choice ours means we can move you to something better as it arrives, at no cost to you and with no change to your platform.

You are not locked in by it. See questions 6 and 7.

5 WILL WE GET THE SOURCE CODE IN OUR OWN GITHUB?

Yes. On final payment, into a repository owned by you, in standard form that any competent developer anywhere can pick up and continue. That repository is yours from that day and we cannot take it back.

6 CAN IT BE MIGRATED OFF YOUR INFRASTRUCTURE, AND AT WHAT COST?

Yes, and we will write the terms into the contract so it is not a matter of goodwill.

If you end the agreement, we transfer the whole platform, the application, the domain routing and the databases, to an environment you name, within a stated number of days. That transfer is included. You are never held hostage by where it is hosted.

What would be quoted separately is a larger re-platforming, moving to an entirely different provider or handing it to a new development team who want it rebuilt their way. That is a project rather than a handover.

Owning something and having someone else move it for you are two different things, and we would rather say that now than have it be a surprise.

7 WHAT IF WIZARD WEB BECOMES UNAVAILABLE?

Your protection here is contractual and technical rather than a promise about people, which is the only kind worth having.

The code is in a GitHub repository you own. Your domain, your Stripe account and your email service are in your name with your billing. Any competent developer can take the repository and stand the platform up elsewhere. The contract carries the transfer obligation in question 6 and it survives us.

If we disappeared tomorrow you would lose your developer. You would not lose your business, your data, your customers or your ability to keep trading.

SECTION 2: YOUR VISION VS OUR PROPOSAL

8 CAN YOU BUILD BROWSE FIRST, OR ARE YOU PROPOSING AI DISPATCH?

We build to your vision, and we will be direct rather than talk around it. The AI in the outline is intake and dispatch shaped: it reads a job description, works out the trade and area, and captures the lead. That is the model you have said you do not want, and for a browse first marketplace you are right.

It is there because I was sketching from limited information, not because it is a product I am attached to. The homeowner browsing and choosing is the marketplace. The AI helps people find the right contractor faster and helps contractors present themselves well. It supports the choice, it does not make it.

9 AI AS SUPPORTING TOOLS RATHER THAN THE PRIMARY PRODUCT?

Yes. That is how we build and present them.

10 HOW MUCH TRANSFERS TO THE OKANAGAN?

The system, the code running profiles, search, quotes, invoicing and messaging, is not tied to any city and transfers completely. What is city specific is the data, the listings and sample content, which currently reflect central BC because that is where earlier work was. None of that belongs in your build. Your version gets Okanagan trades, Okanagan towns and Okanagan content from day one. Normal build work, included.

11 WHAT ABOUT A MOBILE APP?

We can build both, and here is how.

The back end, the website and the database, is what runs everything. Almost all the functionality lives there. An app is the front end, a delivery device fed by the same back end. That is why the platform comes first and the app second, and why the app is a smaller decision than it sounds.

Included in the platform build: a PWA, an installable web app that works across iPhone and Android from the same code, no app store required.

Native apps published to the Apple App Store and Google Play: \$1,500 for both, published to each store. That happens once the platform and the PWA are finished, because wrapping a moving target doubles the work.

Two costs that are yours rather than ours, because the accounts must be in your name: Apple's developer programme at \$99 a year, and Google Play at \$25 once.

An honest opinion rather than a sales one. There is real utility in an app for the trades, who are on a job site with dirty hands and want one tap. There is probably less for consumers, who have app fatigue. But if we are building for the trades anyway, one app serving everyone costs no more difficulty.

SECTION 3: AI COMPONENTS

12 CONVERSATIONAL PROFILE BUILDER FOR CONTRACTORS?

Included in the build. It does not exist in the outline today. New work, and it fits the scope.

13 PREFERENCE PROFILE FOR HOMEOWNERS?

Included at a basic level, a short set of questions at signup that shapes what a homeowner sees first. Also new work. A recommendation engine that learns over time is a later addition, priced when wanted.

14 NATURAL LANGUAGE SEARCH?

Included, and here is the honest state of it. The outline already runs an AI that reads a plain English description of a job and correctly works out the trade, the city, and whether it is urgent. That understanding is real and running today. What it currently does with it is capture a lead. Turning it into browse style results, ranked profiles a homeowner scrolls and chooses from, is build work in your project. The hard part is proven. The presentation is what we build for you.

15 WHO CONTROLS THE AI BEHAVIOUR?

Small adjustments, tone, wording, which questions get asked, are yours through an admin panel without needing us. Deeper changes to what the AI can do go through us, as any software change would with any developer. The contract will list which controls sit in your dashboard and which are a change request, so it is not left vague.

SECTION 4: ZONING AND PRICING MODEL

16 CAN IT WORK WITHOUT EXCLUSIVE TERRITORIES?

Yes, and we agree with your instinct. The exclusive territory idea was a suggestion in a sketch, not a requirement of the platform. We are dropping the framing.

The corrected model: every contractor appears in the directory, always, at every tier. Nobody is shut out and no homeowner's choice is narrowed by someone else's subscription. What a premium tier buys is priority rather than exclusion: top placement in a given area, and a head start on new leads there, for example an hour before others in the same trade and area.

A paid advantage inside an open marketplace, not a locked out competitor. That fits your browse first philosophy properly. Worth walking the tiers and numbers through live.

One thing rather than have you find it: our own site still carries the old exclusive territory wording on its contractor page. We are correcting it.

17 HAVE YOU ACHIEVED THE \$14,600 A MONTH?

No. We have not achieved that on any platform we run, and we want to be completely clear about what that number is.

It is a projection, not a track record, built as a middle of the road estimate rather than a best case, from assumptions about how many contractors sign up, at what tier, in a market of a given size. We have no comparable platform of our own generating that revenue and we make no income claims of any kind.

We will give you the full worksheet, subscription counts, tier mix, price per tier, so you can check every input and adjust it to your own market and your own judgement. If you would rather build your model from scratch and treat our platform purely as the delivery mechanism, that suits us fine. We build the platform. We do not manage or promise your income.

SECTION 5: USAGE FEES

18 AND 19 THE CAP AND THE WORST CASE.

The most important thing first: these costs may not apply to you at all. The usage fees attach to the AI voice and SMS dispatch features. If we do not incorporate those, which is on the table given your browse first direction, the question largely disappears. That is a decision to make together rather than a cost you inherit.

What is included in the \$500: webchat and the basic AI. Those cost us little enough to carry, and you should not have to think about them.

What is metered: email, SMS, and especially voice calls. A lot of consumer software presents this kind of thing as unlimited, which is exactly why it is confusing. Nothing is truly unlimited. At launch it is a rounding error. If this takes off the way we all hope it stops being nothing, and somebody has to account for it. We would rather you know now than in month eight.

Two things make that a non issue rather than an exposure.

These features are optional. Voice in particular is a choice.

And the cost can sit with the contractor rather than with you. The contractor who switches on AI follow up for their own leads is the one generating the cost. We can build the billing into the platform so it passes to them. That turns a cost you carry into a margin line you earn.

If the cost does sit with you, here is the arithmetic with assumptions visible. A heavy month: 500 completed transfers across the whole directory, averaging 3 minutes per transferred call.

Base fee		\$500
Transfers	500 x \$0.60 (top of range)	\$300
Voice	500 x 3 min x \$0.15 (top of range)	\$225

Worst case		\$1,025

At double that volume, roughly \$1,850.

And yes to a hard cap: a monthly ceiling, an alert at 75 percent of it, and the system throttling or queueing further AI activity rather than billing past it without your agreement. You choose the number. We suggest \$1,000 above the base fee to start, reviewed after three real months.

SECTION 6: THIRD PARTY SERVICES

20 WHICH THIRD PARTY SERVICES DOES THE PLATFORM DEPEND ON?

We will be straight about how we answer this one.

In your name, always, because these touch your money and your identity:

```
Your domain registrar  
Stripe, so every dollar your members pay goes to your account, never through  
ours  
Apple Developer and Google Play, if we build the native apps
```

We hold no account that can take your customers' money or hold your name.

Everything else, hosting, database, storage, email delivery, mapping, and the AI services, is provided and managed by us as part of your monthly service. Those are our tools and our operational choices rather than a list we hand over, for the same reason a builder does not itemise which brand of tools are in the van. What matters to you is the wall, the warranty and the price.

There is a real benefit to you in that arrangement, not just to us. This field moves quickly. Better and cheaper services appear constantly. Because the tooling is ours to choose, we can move you to something better as it arrives without a renegotiation, at no cost to you, with no change to your platform. If we were locked into naming a vendor in a contract today, you would be locked in with us.

What protects you is not the list. It is this:

```
You own the source code and the intellectual property outright, and it is in  
a GitHub repository you control from the day the build is paid for.  
You hold every account that touches your money.  
On termination we transfer your platform to infrastructure you name, within  
a stated number of days, at no charge, per question 6.  
Any usage based cost is capped, and you approve the cap, per questions 18  
and 19.
```

Some services are optional and may never apply at all. If we build AI voice and SMS follow up, those carry usage costs and we would discuss whether they belong in the product. Depending on how we structure it, they may amount to nothing.

And if you would rather fund a particular service directly in your own name at any point, say so and we will move it. Nothing here is designed to trap you.

SECTION 7: PARTNERSHIP AND LEGAL PROTECTION

21 HOW IS OUR 49/51 PARTNERSHIP REFLECTED?

Both partners named as signatories, along with the partnership entity. We are happy for the contract to require both partners' authorisation for defined major decisions: contract amendments, IP transfer terms, termination. Tell us the threshold you want for a major decision and we will write it in plainly.

22 WILL YOU SIGN A MUTUAL NDA?

Yes, before any further detail is exchanged. Send your form or we will send ours, whichever is faster.

ON SPEED, SINCE OUR EARLIER PROPOSAL MENTIONED IT

We build for 100 out of 100 on Google's speed tests and that is genuinely the target. We will not guarantee a precise score, because it moves with the content you add, the images you upload, and Google's own scoring changes. The effort goes in. The exact number is not ours to promise.

NEXT STEP

The items best handled live are the tier structure in question 16, and whether AI dispatch belongs in the product at all, since that decides section 5 entirely.
